PROFILE

Hi, I am Trung, a mobile developer with over 5 years of experience in Flutter. I was lead developer of the team behind HOMEE, a technology platform for connecting insurers, policyholders, and skilled service providers in the claims process that raised USD36 million in B-round financing. I was also behind the dev team of VinID - the multipurpose app with 5+ million downloads, offering a wide range of services like e-wallet, e-commerce, payment and apartment management. Not only that, I add a unique flavour by leveraging my expertise in FFmpeg and Unity, two tools that are hard to find these days in Flutter developers. My portfolio includes:

For FFmpeg:

- Building cross-platform audio and video players
- Processing, editing, transcoding, compressing and streaming video files
- Designing innovative and custom filters and effects for mobile cameras

For Unity:

- Furniture: Creating AR apps that allow users to select furniture from a catalog and virtually place it in their home environment with accurate color, texture and lighting
- Music: Elevating fan engagement via AR by transforming music into a much deeper visual experience, bringing environments to life using 3D animation and storytelling
- Education: Designing apps for Real Bodywork that offer a 3D exploration of the body's organ, muscle and skeletal systems as well as visual quizzes on anatomy
- Gaming: Producing casual AR & VR games in various genres such as racing, FPS, RPG and puzzle, most of which can be played with limited room space

EMPLOYMENT HISTORY

Independent Freelancer, Upwork [upwork.com], Ho Chi Minh
JANUARY 2016 — PRESENT

- Completed over 20 jobs, aggregating close to 5,000 hours
