PROFILE

My name is Yacoub Al-Haidari, and I am a Full stack developer with 3+ years of experience in developing innovative web applications and user interfaces. I am proficient in front-end development primarily through HTML, CSS, JavaScript, and various libraries. On the back-end, I have a wide knowledge of server-side languages, including PHP and Laravel, Livewire, Vue.js, as well as databases such as MySQL. Additionally, I have experience in developing Application Programming Interfaces (APIs) and developing using the microservices architecture.

EMPLOYMENT HISTORY

Front-End Developer, Growth Compnay, Sana'a

2021 — NOVEMBER 2021

Developed front-end architecture that improved scalability and performance of the website

Employed AJAX and JSON technologies to create a seamless data exchange between the front-end and back-end

Optimized the front-end user interface for improved UX/UI, resulting in a X% increase in user engagement

Back-End Developer, Korean version, Sana'a

2022 — NOVEMBER 2022

I designed a secure authentication system that complied with industry standards for safeguarding data and preserving privacy. In addition, I established an API gateway that enhanced system efficiency and minimized latency. Furthermore, I built a monitoring system to oversee application performance and notify stakeholders of any potential problems.

Full Stack Developer, epulsecart, Sana'a

OCTOBER 2022 — JULY 2023

I integrated a Responsive Design that enabled the application to be utilized on multiple devices with a consistent user experience. By utilizing server-less architecture, I decreased expenses and enhanced scalability. Additionally, I created a secure authentication system that guaranteed user privacy and data security.

Tall stack developer , cloudszone Company, saudi arabia

- Developed a full stack web application from scratch, including back-end services, front-end interface, and database
